
Persona: Too Late Rules

Combat

Combat is based on cards. Each character has a hand of cards that represent abilities or items they have. Each card can be used once per event.

Item cards may be traded freely; other cards cannot. You can get new cards in various ways, such as successfully revisiting past events.

Combat proceeds in turns, starting with the PCs. On your turn, play one card to attack with and pick who you're attacking. (Cards by default have a single target, but some cards may attack more than one character.) Each defender must discard a card or cards with a total strength that meets or exceeds the attacker's card's strength. If they cannot, they're taken out; when everyone on a side is taken out, that side loses the combat.

You can pass instead of attacking if you really want to.

Each character has a Weakness to a particular element. Attacks of that element have double strength against them.

PCs can have their turns go in whatever order they want. If you can't agree who's going next, play Rock Paper Scissors.

Some cards have strength *; these can't be used to attack or block, and instead have a special effect when played.

There will be a table with decks on it for cards you gain during game. Each character has an Experience deck: take the top card when you gain an Experience. There's also a Darkness deck and a deck for each opponent you can face. Don't look at or reorder decks.

Feel free to discuss the cards you have and their strengths and effects.

Social Links

You may also have a Social Link with another character. If you have a Social Link with someone, you can sacrifice yourself to block an attack aimed at them. This takes you out. You can do this even if you couldn't block the attack normally.

During game, if you feel like you're connecting to another character, and they agree, the two of you may form a social link. Social links are always mutual. Each character can only form one social link this way during game.

Other social links may be restored via revisiting events.

If you make an attack in combat against someone you have a social link with, that breaks the link (for both of you).

Contingency Boxes

Each player has a stat card to track your stats and other information about your character. Your stat card also has three "contingency boxes" that have a condition like "if you win a fight". If you meet the condition in game, when it's convenient remove the sticker and read what's underneath. This may just be descriptive text describing a memory, thoughts, or feelings, or it may have some other effect on your character.

Your character is vaguely aware that their contingency box conditions could represent something significant for them, so feel free to pursue (or avoid) the conditions in game.

Stats

Characters have 3 stats: Empathy, Courage, and Knowledge, which each have a numerical level. Everyone starts with one stat at 2 and two at 1. These stats are useful when visiting the past.

Empathy helps you understand other people and be an effective mediator.

Courage helps you act effectively in the face of danger.

Knowledge helps you figure things out and formulate plans.

Challenges when traveling through time often require certain stat values to pass. You can voluntarily fail a challenge even if you could pass it by not using your full stat value; it's not necessarily obvious to others that such a failure was intentional.

Visiting the Past

Next to the Doorway, there is a calendar of events over the past month, one event per day. You can choose to revisit these events. Each event can only be revisited once. Multiple non-overlapping groups can use the Doorway at the same time.

When you finish an event, you'll put sticker dots on it showing what effect you had. Possible dot colors include:

- Blue** Decreased panic.
- Purple** Increased panic.
- Red** Saved multiple innocent lives.
- Pink** Saved a particular individual.
- Yellow** Decreased Shadow activity.
- Black** Increased Shadow activity.
- Green** ???
- Lime** ???

There are also signs in gamespace that an event may instruct you to reveal, representing changes to your environment in the present based on changes to the past.

Each character starts game with 3 Chances, in the form of glass tokens. These are tradable physical items. For a group to revisit an event, all members must agree what you're revisiting, and someone must spend a Chance.

Events are not independent; the past can affect the future. Some events may refer to the dots before the event; that is to say, on an event chronologically earlier in the calendar. Thus, what you do in one event can affect later events.

There are three types of events you can revisit: Disasters, Arguments, and Battles.

Disasters

The chaos of the Dark Hour spread to the normal world in the past month. While the Shadows have stayed hidden until recently, disasters rooted in the Shadows have become commonplace, hurting and killing your oblivious classmates and professors, causing great disruption and national panic.

Revisiting a Disaster requires two people. There will be two role cards for the event, each with different requirements.

If the total stats of the two of you meet the calendar requirements, each choose a role card and read. When ready, roleplay the scenario together. Each of you will have a choice or challenge during the scene; choose simultaneously and remove the corresponding sticker when that happens. You may trade role cards before choosing. (Challenges may have requirements different from the initial requirements.) The result boxes will tell you what dots to add or any other effects.

If you added a dot that wasn't black or purple, you each get an Experience card and a point of Knowledge.

Arguments

You all aren't as close as you used to be. There've been a lot of arguments over the past month that have driven you apart from one another. The trust you had? It's mostly gone. Some of it, probably, for good reasons.

Revisiting an Argument requires the two people who argued to open the Doorway and one other person to go back and intervene. The arguers, playing their past selves, roleplay the conflict described. Each arguer takes the corresponding role card, reminding them of the choice they couldn't agree on and how they felt about it. The intervener then joins in, attempting to resolve the argument in a way that both arguers are happy with. To succeed, the arguers must both agree on which option to choose. The intervener's result box will tell you what dots to add or other effects.

On agreement, the arguers get a Social Link with each other and a point of Empathy, and the intervener gets an Experience card. If no agreement is reached, the arguers each get a Darkness card.

Battles

Each of you has a Shadow, some dark parallel that appeared at some point over the last month to wreak havoc. While perhaps once you would've fought these shadows, you were too divided. Can you do better now?

The Doorway can only fit three people, so at most three people can go back to battle a Shadow. You also need the person whose Shadow you seek to fight to open the Doorway.

That person plays the part of their Shadow, using the deck for their shadow

from the table, **plus a bonus Darkness card for every black dot before this event in excess of the number of yellow dots** before this event. When playing your Shadow, play to win: do your best to make strong, effective attacks and to avoid defending wastefully.

If the party defeats the Shadow, add a yellow dot, and party members that weren't taken out each get one Experience card and gain one Courage. Otherwise, the Shadow strengthens its connection to the corresponding character: add a black dot and that character gets two Darkness cards. (The Doorway pulls the party back to the present before the Shadow can finish them off.)

Each Shadow will have one or more Item cards that the party can claim if they defeat it. If the party cannot agree on who gets each item, they must fight it out with their remaining combat cards.

What Happens Next

After this stolen time is up, you seven will have one last chance to face Death. This time, there'll be no second chances.

When the hourglass runs out, the wards of this haven will shatter and you'll all be swept into the boss fight against Death. This works like a Shadow battle, except all seven of you participate.
